Lets  go WiFi™

LEADING SUPPLIER OF
WIRELESS INTERNET

1 Before You Start

You need a **Personal Digital Assistant (PDA)** or Laptop with **Wireless capability (WiFi)**.

2 Your wireless enabled device should automatically detect the **letsgowifi Service Set Identifier (SSID)**.

If not, you will need to follow the manufacturers instructions of your device to manually set the **SSID** to **letsgowifi**.

3 Once you are **successfully connected**

1. **Launch your Internet browser.**
2. **If using Microsoft Internet Explorer**, ensure that '**Every visit to page**' option is set.

Click on **Tools > Internet Options > General Tab > Settings > Every visit to page**.

4 Welcome page

Initially, you will be presented with the **Welcome page**. To surf the Internet, log-in with a valid user name and **password**. This may be requested at reception.

Security

Let's Go WiFi regards your security as an extremely serious matter. We use cutting edge encryption technology for secure logon to our system. We also implement a neighbour blocking scheme to prevent other users of the local network connecting to your PC.

However, if you require further security of your data traffic and in particular, use of remote access to a corporate network, we recommend installing up to date anti-virus software, a personal firewall and IP SEC VPN. For more information, refer to our website:
